Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

10 20 30 40 50

Output: 10 20 30 40 50

Answer

```
// You are using GCC
```

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
// Define the node structure
```

```
struct node {
```

```
    int id;
```

```
    struct node* prev;
```

```
    struct node* next;
```

```
};
```

```
// Head pointer for the list
```

```
struct node* head = NULL;
```

```
// Function to create a new node
```

```
struct node* createNode(int id) {
```

```
    struct node* newNode = (struct node*)malloc(sizeof(struct node));
```

```
    newNode->id = id;
```

```
    newNode->prev = NULL;
```

```
    newNode->next = NULL;
```

```
    return newNode;
```

```
}
```

```
// Function to insert a node at the end
```

```
void insertAtEnd(int id) {  
    struct node* newNode = createNode(id);
```

```
    if (head == NULL) {  
        head = newNode;  
        return;  
    }
```

```
    struct node* temp = head;  
    while (temp->next != NULL)  
        temp = temp->next;
```

```
    temp->next = newNode;  
    newNode->prev = temp;  
}
```

```
// Function to display all student IDs
```

```
void display() {  
    struct node* temp = head;  
    while (temp != NULL) {  
        printf("%d ", temp->id);  
        temp = temp->next;  
    }  
    printf("\n");  
}
```

```
// Main function
```

```
int main() {  
    int n, id;  
    scanf("%d", &n);
```

```
    for (int i = 0; i < n; i++) {  
        scanf("%d", &id);  
        insertAtEnd(id);  
    }
```

```
    display();
```

```
    return 0;  
}
```

Status : Correct

Marks : 10/10
